

## TeleProductions International

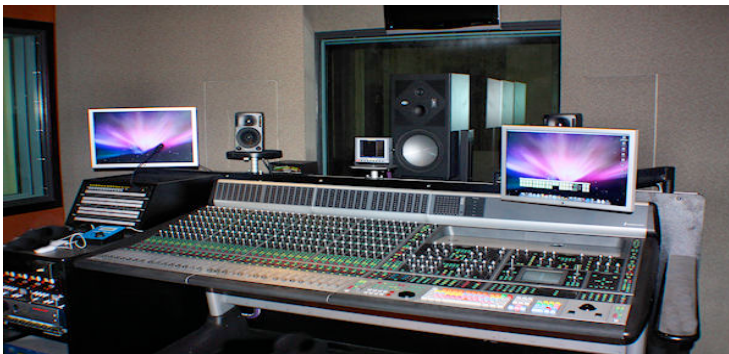

Washington DC

TeleProductions International, based in Washington, DC, produces and distributes high quality programming worldwide. When TPI decided to go high definition, they also decided to build an entirely new facility. Diversified was brought in early in the project, and worked in the center of a project team that included architects, construction contractors and the Walters-Storyk design group.

The facility includes mixed format editing with both Final Cut Pro and Avid Systems, and a custom SAN to allow for high level collaboration. There is a flexible TV studio with separate video and audio control rooms, and two graphics rooms to produce material for both post and production. A satellite farm outside brings in feeds from new agencies like Reuters and others.

Video is only part of the story. TPI insists that their audio quality matches the HD video quality, so there is an audio recording studio with dual control rooms, capable of recording in full Dolby E. Mastering is done with Pro-Tools. And to view this programming? Diversified designed and built a full digital cinema theatre to capture every nuance of the sight and sound in each production, and then distribute programs through an in-house CCTV system to every office in the facility.

In the end, TeleProductions International's new facility exhibits one of Diversified Systems' strengths – our ability to design and build facilities that incorporate every aspect of media technologies into a unified whole.

### Special Points of Interest:

Ground-up High Definition facility including TV and audio studios, mixed format editing, satellite farm, digital cinema, asset management, MATV, and program aggregation. Diversified provided consulting, design, project management, all the equipment, and integration.

### Key Manufacturers:

Apple, Avid, Hitachi, Calrec, For-A, N-vision, Miranda, Dolby, Crestron, Pro-Tools.
