

Diversified Systems Opens West Coast Integration Center in 2004

January 1, 2005

Diversified Systems expanded its nationwide scope with the opening of their west coast offices in Santa Clara, CA.

The 15,000 sq. ft. facility is capable of large-scale on-site integration and fabrication, which has proven effective in the construction of 6 HD mobile production trucks in 2004. The facility also houses a sales office, engineering and CAD office, fabrication shop, cable manufacturing and extensive staging areas for several simultaneous projects.

The facility is being overseen by Duane Yoslov, who has extensive experience in the systems integration business through his many years at Sony. "Diversified Systems can more effectively service our clients on the west coast by establishing a major facility here", stated Yoslov. "We have been very fortunate and successful in our first 12 months, and are well on our way to an equally strong 2005."

Among the key personnel joining the west coast Diversified team is Molly McCourt, who brings a tremendous wealth of management experience gained through her years of engineering and project management at Industrial Light and Magic, and as Director of Engineering at 20th Century Fox Post Production.
