

Lincoln Financial Field Philadelphia, Pennsylvania

Project: Network Ops Center
Contract Value: \$ 3,200,000.00

Diversified Systems was contracted to design and install the high definition and standard definition video network operation center and post production center for the new home of the Philadelphia Eagles, Lincoln Financial Field.

Diversified's extensive experience in the technology driven sports entertainment arena was put to good use in the design of this hub of production activity. The control room feeds video and graphics via large LED board for in-stadium fan entertainment and information. Working closely with Daktronics on design and engineering the mammoth 26' high by 96' wide Pro Star LED display commands attention. All in house

camera feeds and an eight channel instant replay system can be routed to the big screen via the control area. The video network operation center layout is the system hub for all network TV game day cameras feeds as well.

The broadcast quality post-production editing and graphics system was engineered to produce highlight reels of all the big plays as well as handle a game day coach's show for the network affiliates.

Special Points of Interest

- Full HD and standard definition production facility for the stadium.
- All in-house camera feeds and an eight channel replay system can be routed to the big screen
- High end Post production facility.
